Many elements are necessary to manage a successful dysphagia treatment program. The VitalStim Dysphagia Rehabilitation Program provides you with the essential tools and resources to realize positive patient outcomes in an efficient and comprehensive manner. From equipment to education to practice integration and ongoing support, the VitalStim Dysphagia Rehabilitation Program increases results and reduces costs.

VitalStim Therapy is an advancement in dysphagia treatment, backed by clinical data and proven safe. It is the only NMES technology cleared by the FDA for dysphagia treatment. Research on the technology has demonstrated improved swallowing scores and a high incidence of discontinued tube feedings. The VitalStim Dysphagia Rehabilitation Program: advancing your program, advancing patients.
